#### · REMOVAL OF ANODE-CAP

NOTE: Short circuit the anode of the picture tube and the anode cap to the metal chassis, CRT chield or carbon painted on the CRT, after removing the anode.

## REMOVING PROCEDURES

① Turn up one side of the rubber cap in ② Using a thumb pull up the rubber cap firmly in the direction indicated by the arrow ③.

When one side of the rubber cap is separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling up it in the direction of the arrow ©.

#### · HOW TO HANDLE AN ANODE-CAP

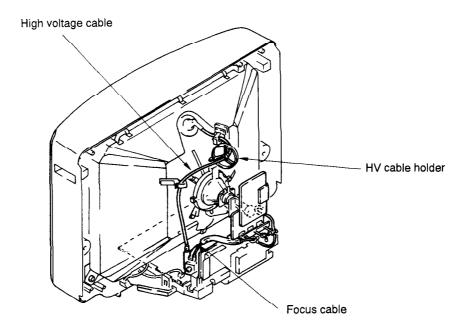

- Don't hurt the surface of anode-caps with sharp shaped material!
- ② Don't press the rubber hardly not to hurt inside of anode-caps! A material fitting called as shatter-hook terminal is built in the rubber.
- ③ Don't turn the foot of rubber over hardly! The shatter-hook terminal will stick out or

# 2-5. HIGH VOLTAGE CABLE, FOCUS CABLE WIRING ARRANGEMENT

After repairing, arrange the high voltage cable and the focus cable as shown in the figure below.

# SECTION 3 SET-UP ADJUSTMENTS

- The following adjustments should be made when a complete realignment is required or a new picture tube is installed.
- These adjustments should be performed with rated power supply voltage unless otherwise noted.

The control and switch below should be set as follows unless otherwise noted:

PICTURE control normal BRIGHTNESS control normal

Perform the adjustments in order as follows:

- 1. Beam Landing
- 2. Convergence
- 3. Focus
- 4. White Balance

Note: Test Equipment Required.

- 1. Color-bar Pattern Generator
- 2. Degausser
- 3. Digital multimeter

#### Preparations:

- Feed in the white pattern signal.
- Before starting degauss the entire screen.

#### 3-1. BEAM LANDING

- Input the white signal with the pattern generator.
   Contrast Bightness normal
- 2. Position neck ass'y as shown in Fig 3-2.
- 3. Set the pattern generator raster signal to red.
- 4. Move the deflection yoke to the rear and adjust with the purity control so that the red is at the center and the blue and the green take up equally sized areas on each side.

(See Fig. 3-1 through 3-3.)

- 5. Move the deflection yoke forward and adjust so that entire screen is red. (See Fig. 3-1.)
- 6. Switch the raster signal to blue, then to green and verify the condition.
- When the position of the deflection yoke has been decided, fasten the deflection yoke with the screws.
- 8. If the beam does not land correctly in all the corners, use a magnet to adjust it. (See Fig. 3-4.)

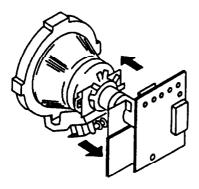

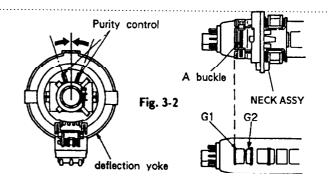

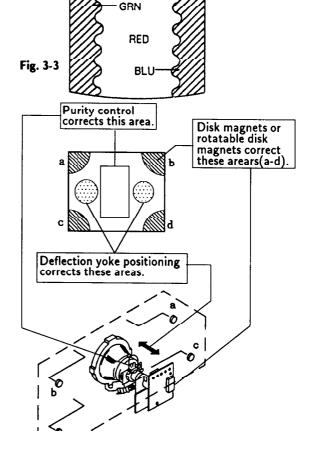

Fig. 3-1

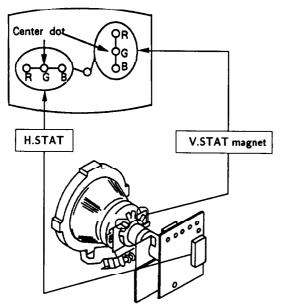

#### 3-2. CONVERGENCE

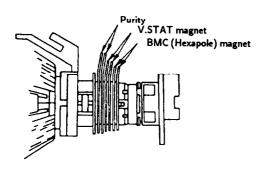

#### Preparations:

- Before starting perform FOCUS, H.SIZE, V.LIN and V.SIZE adjustments.

# (1) Horizontal and Vertical Static Convergence

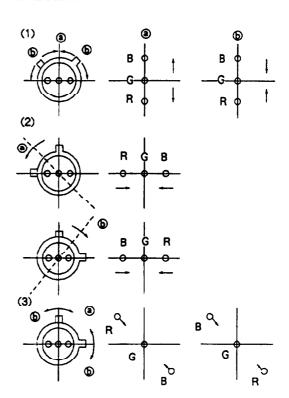

- 1. Adjust H.STAT VR to converge red, green and blue dots in the center of the screen. (Horizontal movement)
- 2. Adjust V.STAT magnet to converge red, green and blue dots in the center of the screen. (Vertical movement)
- 3. If the red, green and blue dots do not coverge in the center of the screen with H.STAT VR, perform horizontal convergence adjustment using H.STAT VR and V.STAT magnet as shown below. (In this case, H.STAT VR and V.STAT magnet effect each other.)

 Tilt the V.STAT magnet and adjust static convergence to open or close the V.STAT magnet.

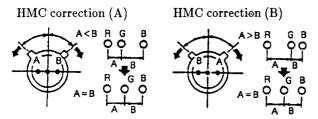

4. When the V.STAT magnet is moved in the direction of arrow (a) and (b) , red, green and blue dots move as shown below.

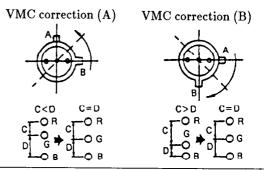

If the blue dot do not Converge with red and green dots, perform following steps.

HMC and VMC correction for BMC (Hexapole)
 Magnet.

 HMC (Horizontal Miss Convergence) correction and motion of the Electron Beam with the BMC Magnet.

 VMC (Vertical Miss Convergence) correction and motion of the Electron Beem with the BMC Magnet.
